Press and hold until the volume menu appears, then Press **2** and **3** button to adjust the volume level

**Note: The player will turn off automatically in the standby mode.**

**How to convert/split APE music**

An entire multi-track audio CD may be ripped to a single audio file and a cue sheet. However software audio players and hardware digital audio players often treat each audio file as a single playlist entry, which can make it difficult to select and identify the individual tracks. A common solution is to split the original audio file into a series of separate files, one per track.

Step 1

Unzip TTplayer that we sent. And then add your APE music into TT player.

Step 2

Select the music you need to convert, and then right click, choose "Convert Format", as the picture shows:

Step 3

Now Choose "Monkey's Audio(APE)编码器"-----"Convert now"

Step 4

When the conversion is finished, put the split APE music into your MP3 player. Now, enjoy your music!

**Precautions:**

1. Do not drop the player or put any heavy object on top of it.
2. Do not modify, repair, or disassemble.
3. Do not expose directly to water, alcohol, benzene, etc.
4. Do not use while driving, cycling, or operating any motorized vehicle.
5. Do not leave the device under direct sunlight or high temperature.
6. If the player causes interference to radio or TV reception, turn the player off and move it away from the radio or TV.
7. Avoid using the player at high volume.
